

## **Kroff Well Services joins Marcellus Shale Coalition**

Published: Jan 31, 2011

Pittsburgh-based Kroff Inc. says its Kroff Well Services business unit, which offers remediation of flowback waters and production brine for frac water reuse, has joined the Marcellus Shale Coalition (MSC) to offer creative solutions and expertise in the areas of responsible water treatment and waste management. Kroff engineers design frac fluid and flowback/production brine treatment technologies that are effective and environmentally responsible.

“Drilling in the Marcellus Shale has accelerated at a rapid pace, and Kroff is positioned to help oil and gas companies continue to meet environmental regulations in terms of production water and flowback remediation for reuse,” said David Kern, area manager of Kroff Well Services, and a member of the MSC subcommittee on waste management and recycling.

Members of the Marcellus Shale Coalition work with partners across the region to address issues with local, state, and federal government officials and regulators in regard to all aspects of producing clean-burning natural gas. MSC is committed to the responsible development of natural gas from the Marcellus Shale and the enhancement of the region’s economy.

To date, natural gas producers have already invested more than \$4 billion in the Marcellus, mostly in Pennsylvania, for lease and land acquisition, new well drilling, infrastructure development, and community partnerships, with an even greater investment expected in the future.
